

POWERSTOP®

EVOLUTION **TRU-CAST™** TECHNOLOGY

PERFORMANCE DRILLED & SLOTTED ROTORS

SOLD IN PAIRS

Precise machining & castings

All Power Stop rotors are reverse engineered from OEM samples. Machining specifications: Rotor run out is within .0015 and DTV tolerance specification is within .005. All rotors are balanced.

Beveled Drill holes

Beveled and precision drill holes help keep rotors temperatures down during extreme braking performance.

**UP TO 180°
COOLER**

Rounded Slots

Slots keep a clear contact patch between the pad and the rotor by sweeping away gas and dust.

Silver Zinc Plating

All drilled and slotted rotors (except for hub rotor assemblies) are silver zinc plated to help shield and resist rust during normal operation.

Power Stop premium drilled and slotted performance brake rotors are now available for most domestic and import passenger and light truck applications. Power Stop performance rotors are engineered to reduce the risk of rotor warping and cool the brakes to avoid high temperature brake fade. When you combine the Z36 Truck and Tow brake pads or Z17 Evolution ceramic pads with Power Stop drilled and slotted performance rotors, brake output is improved up to 37% for shorter stopping distance. The drilled and slotted rotors reduce brake temperature up to 180 degrees to avoid resin glazing and uneven friction layer deposits on the rotors. These friction deposits are one of the leading causes of rotor warping due to brake pad material operating outside of its designed temperature range. The slots help remove friction material and gas between the pad and rotor to improve pad bite.

POWERSTOP®

EVOLUTION^{PLUS}

CERAMIC DISC BRAKE PADS WITH HARDWARE KIT

The Z17 Evolution® Plus product line will combine our performance proven Z16 Evolution® Ceramic pads with application specific brake installation hardware kits. Each hardware kit will include stainless steel abutment clips (where applicable), anti-rattle hardware clips, piston clips or bushings and sleeves as required per application.

If a part number is not available in Z17 Evolution Plus, then please check availability in Z16 Evolution ceramic pads without hardware.

CLEAN RIDE CERAMIC
LOW DUST FORMULA

RUBBERIZED SHIMS
NOISE FREE BRAKING

THERMAL SCORCHED
FOR FAST BREAK-IN

PREMIUM HARDWARE
HARDWARE INCLUDED

SAME GREAT EVOLUTION FORMULA

*HARDWARE IN EVERY BOX

OEM

Positive Mold Technology for consistent fade-free performance

20%

more stopping power than other leading brands

NOISE FREE BRAKING

DUAL LAYER RUBBERIZED SHIMS

THERMAL SCORCHED

FOR FAST BREAK-IN
